

# Comparator Products Testing

Lancaster Laboratories' offers a comprehensive range of comparator product testing to the pharmaceutical industry. We provide analytical support to new products in development and to marketed products of the same therapeutic class. Here, analysts focus on the innovator's product to develop and validate methods needed to support the client's stability and clinical studies.

With pharmaceutical companies continually outsourcing various stages and/or elements of the drug development process-especially those tasks/activities that do not add knowledge back into the client's R&D activities-comparator product testing has become one of those activities that is being regularly outsourced.

## **Among the comparator products testing services we offer are:**

- Release testing of clinical supplies/materials for manufacturing.
- Development and validation of assay, impurity and dissolution methods.
- Stability studies.
- Clinical release.
- Clinical re-assay.

We welcome client visits or audits to verify our strict compliance with current GMP requirements and to demonstrate the expertise and experience of our scientists. We're equipped with state-of-the-art instrumentation, and all analytical operations are based on written, detailed SOPs and stringent quality assurance practices. Our multiple shifts of highly trained analysts, in conjunction with our considerable laboratory capacity, can handle projects of any size.

For more information on our comparator product testing capabilities, please contact your project manager or Pharmaceutical Business Development at 717-656-2300.
