

Who We Are

Lancaster Laboratories is one of the nation's leading testing laboratories. We provide comprehensive analytical services in chemistry and microbiology to a broad spectrum of clients in the pharmaceutical, biotech, and animal health industries. Among our services are analytical method development and validation, drug substance and drug product stability testing and storage, raw materials testing, commercial product release testing, sterile product support, and non-sterile product and facility support.

We've become a recognized leader in contract analytical services because of our technical expertise, superlative service, and rigorous compliance with applicable regulations. Many of the largest firms in the country use our services, including nine out of ten of the largest pharmaceutical companies in the world. Most importantly, we have a reputation for delivering our data on time, regardless of project size.

Our campus includes two modern facilities with a total of 175,000 square feet of space equipped with state-of-the-art technology and instrumentation. We have dedicated laboratory space for specific technical areas, including 31 stability storage chambers, a 9,000-square-foot controlled microbiology laboratory, a barrier isolation system for sterility testing, and a full array of mass spectroscopy instrumentation, including LC/MS, LC/MS (Ion Trap), LC/MS/TOF, LC/MS/MS, GC/MS and ICP/MS. We employ more than 800 scientists, technicians, and support personnel, many from the pharmaceutical industry.

All new employees in the Pharmaceutical Division are required to demonstrate proficiency in a number of technical training modules developed by Lancaster Laboratories before performing any analyses on client samples. Once aboard, our staff is kept abreast of innovations in technology and changes in regulations through extensive in-house training programs, which include core courses in quality and ethics and refresher courses in cGMPs and GLPs.

We provide value-added service to our clients through our vast experience with regulatory agencies, assigning a single point of contact (and a backup contact) to each client to make sure requirements are met and to maintain trouble-free communication, and by working cooperatively with the client on OOS investigations.

Since our founding in 1961, Lancaster Laboratories has been a "people" company. While we make sure we have good facilities and the latest in technical instrumentation and services, our greatest strength is our people. We make every effort to find and keep excellent employees, provide education and training, give them opportunities to grow, and offer progressive family-friendly benefits. Our strong people orientation has resulted in very low staff turnover and, therefore, a stable and dependable workforce. Beyond that, we strive to live our vision, to "make our clients heroes."

Lancaster Labs Expands Global Services With Microchem Laboratories

Lancaster Laboratories, one of the United States' largest commercial analytical laboratories, has acquired Microchem Laboratories, a premier leader among Ireland's testing and research labs. Global clients will now have laboratory resources available on both sides of the Atlantic to test raw materials and drug products to be marketed worldwide. Microchem's testing services complement the services of Lancaster Laboratories to provide a comprehensive offering to our pharmaceutical, biopharmaceutical and medical device clients worldwide.

Microchem offers microbiological, chemical and environmental analyses to the pharmaceutical, medical device, food and chemical industries throughout Europe and Asia. Microchem has extensive capabilities in both microbiology and chemistry, and offers services including raw materials testing, finished product analysis, stability, batch release testing in to the European Union, method development/ validation, and facility validation support. Established in 1986, Microchem quickly differentiated itself by becoming the first commercial testing lab in Ireland to receive accreditation by the Irish National Accreditation Board to the International Standard 17025.

Lancaster Laboratories provides comprehensive analytical services in chemistry, biochemistry, microbiology, molecular biology, and virology to a broad spectrum of global clients in the pharmaceutical, biotechnology, animal health and chemical industries. Services include analytical method development and validation, drug substance and drug product stability testing and storage, raw materials testing, commercial product release testing, product characterization services, and facility and process validation support.

Microchem and Lancaster Laboratories have become recognized leaders in contract analytical services as a result of dedication to technical expertise, superlative service, broad range of capabilities and rigorous regulatory compliance. Similar corporate cultures of commitment to quality services and ethical treatment of employees and clients are common threads that tie Microchem and Lancaster Laboratories together and ultimately provide a broad scope of services and an outstanding service experience for clients worldwide.
